**Period for Reply** -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 112*

1. Claims 13 and 14 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 13 and 14 both are indefinite in describing the restricted end portion relative to the pressure points. Both recited that the restricted end portion is “forward” of the “last” pressure point. It is not previously described in the claim what is forward and/or rearward with respect to the pipe body. It has also not been described in the claim which pressure point is the first or which is the last in relation to the structure of the pipe body.

### *Claim Rejections - 35 USC § 103*

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 13-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. 5,803,128 to **Reed** in view of EP 332,853 to **Schuttler**.

The patent to **Reed** discloses a hose body including an inner layer composed of a bellow metallic tube (31) and a jacket of at least one outer layer (23) with the hose body having an longitudinal edge. A pipe insert (3) extending longitudinally into the hose body and metallic sleeve (71) compressing against the insert pipe at a pressure point (71) with the bellow metallic tube having a restricted end portion at an end forward of the pressure point. The bellows metallic tube has a straight tube portion integral to the bellows metallic tube. The insert comprises a first portion extending into the hose body upon which the straight tube portion is mounted. Reed discloses the recited structure with the exception of providing a plurality of pressure points. The **Schuttler** reference discloses that it is old and known to provide more than one pressure point onto a metallic sleeve in order to press the jacket and bellow metallic sleeve against the insert.

***Allowable Subject Matter***

2. Claims 17-22 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Response to Amendment***

3. Applicant has amended the claims to incorporate indicated allowable subject matter into independent form, however after further search and consideration, it is believed that the independent claims are not allowable over the prior art nor are they clear in meaning. As discussed previously, it is not clear what is meant by the restricted in portion being “forward” of the “last” pressure point. The restricted portion and the pressure points should be described in relation to the pipe body and metallic sleeve. Additionally, the Reed reference discloses that it is known to provide a metallic bellows pipe having a straight portion integral with the bellow, into which an insert is provided and at least one pressure point provided on the metallic sleeve. From the previous office action, **Schuttler** teaches that it is known to provide a plurality of pressure points onto the metallic sleeve.
